Capture Video with Windows Media Player

1. Hook up camera to computer using firewire or USB cable.
2. Go to Start/Programs/Windows Movie Maker to open a video editing program.
3. Click Capture from Video. Choose your camera and click next.
4. Name the video and choose a location for saving it (Browse for the location). Click next.
5. Choose “Best Quality” and click “next.”

6. Click Capture manually if desired and click next.
7. Cue your clip and click “start capture.”
8. When finished, click “stop capture” and “finish.”

9. You may edit your video with Windows Movie Maker if you wish. However, the video is already captured in Windows Media Format, so you can close Movie Maker and go to Safari to upload the finished video that you just captured.
